

## NSE Module Offerings

### Hospitality Module

The Nomadix Hospitality module is tailored for use in a wide range of hospitality oriented environments. It provides certified interoperability with the widest range of Property Management Systems (PMS) on the market for in-room billing of internet services. Customers can choose from a wide range of hospitality-oriented billing options including both pre/post paid and duration-based folio charging options. Billing records can be mirrored back to additional designated servers for increased reliability and security in record keeping. In addition, a driverless printing option (“Click to Print”) provides the capability for a subscriber to send print jobs to a designated server and have the charge billed to the room.

The module’s features and flexibility make it well-suited for use in hotels, resorts, convention centers, and other guest-centric venues. Platform options that support up to 2000 users are available.

The Hospitality module is supported on all Nomadix wired platforms except the AG5500 Metro. It is not available on Nomadix wireless devices.

**The NSE connects subscribers to internal and external network, and connects to a Property Management System of choice via a serial link (a TCP/IP connection can be used for a one-way PMS connection to a Micros Fidelio Server).**
